SNAGG MANAGEMENT

COURSE INFO SHEET
ISO 27001 for Practitioners

Objective:

The objective of this course is to provide participants with a comprehensive understanding of the latest version of the ISO 27001 standard, ISO 27001:2022, for Information Security Management Systems (ISMS). The training aims to equip practitioners with the knowledge and skills necessary to implement and maintain an effective ISMS in compliance with the requirements of ISO 27001:2022. Participants will learn practical strategies for safeguarding sensitive information, managing risks, and ensuring robust information security within their organizations.

Content:

The course on ISO 27001:2022 for Practitioners offers an in-depth curriculum covering all relevant aspects of the updated standard. Participants will be introduced to ISO 27001:2022, its scope, and its significance in addressing emerging information security challenges and advancements in technology. The course will provide a detailed overview of the key clauses and requirements of ISO 27001:2022, including information security policy, risk assessment, and risk treatment.

Participants will learn about asset management, access control, and cryptography to ensure confidentiality and integrity of information. The training will delve into incident management, business continuity planning, and compliance with legal and regulatory requirements, aligning with the latest industry best practices. Participants will also gain insights into internal audits, management review, and continual improvement of the ISMS, incorporating the latest updates from ISO 27001:2022.

Throughout the course, participants will engage in practical exercises, case studies, and group discussions to enhance their understanding and application of ISO 27001:2022 principles.

Duration:

The course is designed to be completed over 3 days. The training sessions will be structured to allow for comprehensive coverage of the updated standard's requirements while optimizing learning effectiveness.

Assessment:

Participants will be assessed through a written multiple-choice exam. Successfully passing issues a certificate of competence.

Pre-requisites:

Participants should have a basic understanding of information security concepts and IT practices. Prior experience in information security management or related fields will be beneficial but is not mandatory
